Technical Expertise

NON-RECHARGEABLES (PRIMARY)

ALKALINE (p. 20-27) 1.5V/4.5V/9V

ALL ROUND BATTERY FOR LOW TO HIGH DRAIN APPLIANCES

- Technology developed in 1957
- Negative electrode = zinc gel + additives
- Positive electrode = high density MnO_2
- Electrolyte inside the separator for smoother reaction
- Advanced structure with more components vs. zinc

4 Panasonic grades, specific for every type of appliances

4 ALKALINE RANGES

EVOLTA	High premium grade, especially designed to ensure optimal performance for highest drain appliances.
Pro Power	Premium grade, developed to provide reliable and dependable power for all middle to high drain appliances.
Everyday Power	Performs well in devices with low and continuous energy consumptions.

RECHARGEABLES (SECONDARY)

Ni-MH (p. 30-39) 1.2V

BEST SOLUTION FOR HIGH DRAIN APPLIANCES

- Technology developed in 1989
- Coiled positive electrode, separator and negative electrode results in less internal resistance

4 Panasonic grades, specific for every type of appliances

4 RECHARGEABLE RANGES

Ready to Use min. 2450mAh (AA) min. 900mAh (AAA)	Optimal for heavy users who need batteries frequently for high drain consuming devices.
Ready to Use min. 1900mAh (AA) min. 750mAh (AAA)	Ready to use, designed for frequent use, in high to medium appliances which need frequent recharging.
Ready to Use min. 1000mAh (AA) and telephone batteries	Ready to use, designed for occasional use or use in appliances which undergo frequent or constant charging – especially DECT phones.
High Capacity Avg. 2700 mAh (AA) Avg. 1000 mAh (AAA)	Perfect batteries for appliances in need of very high power.

ECO-FRIENDLY: rechargeable up to 1000 times⁽¹⁾ and more

(1) Panasonic internal testing IEC61951-2 2011(7.5.1.3) on AA 1900 mAh; 500 cycles according to IEC61951-2 2017(7.5.1.4).

SPECIALTY BATTERIES (DRY-CELL - PRIMARY)

COIN LITHIUM (p. 42-43)

3V

IDEAL BATTERY FOR SMALL, ENERGY-HUNGRY APPLIANCES

- High energy density
- Long storage life
- No deterioration
- Low self discharge
- Positive electrode = lithium
- Negative electrode = MnO₂
- Suitable for high drain, low drain, pulsed devices

lithium based

MICRO ALKALINE (p. 46-47)

1.5V/12V

ALL ROUND COIN BATTERY FOR LOW TO HIGH DRAIN APPLIANCES

- **Equal construction as standard size alkaline battery**
- Stable discharge
- Excellent leakage resistance
- Negative electrode = zinc
- Positive electrode = MnO₂

zinc based

CYLINDRICAL LITHIUM (p. 44-45)

3V/6V

PREMIUM LITHIUM BATTERY FOR ENERGY-HUNGRY APPLIANCES

- 3 to 5 times higher energy density than standard size alkaline batteries
- Excellent performance in extreme temperatures (-40°C to +70°C)
- Positive electrode = lithium
- Negative electrode = MnO₂

*example shown: CR-123

lithium based

SILVER OXIDE (p. 48-49)

1.55V/6.2V

PREMIUM COIN BATTERY FOR LOW TO HIGH DRAIN APPLIANCES

- Higher energy density
- Stable discharge
- Excellent leakage resistance
- Negative electrode = zinc
- Positive electrode = silver oxide
- Extra alkaline electrolyte

zinc based

ZINC AIR (p. 50-51)

1.4V

EXCELLENT FOR HEARING AID

- Highest energy density of all electrochemical systems
- Chemical reaction with oxygen activates the battery
- Only 1 of the active materials inside the battery
- Negative electrode = zinc

zinc based

Protect Your Precious Appliances

Unique Gas-Suppression Technology

Panasonic Alkaline cells feature advanced Anti-Leak Protection that suppresses the buildup of gas when a battery is over-discharged or stored for a long period. Less pressure means less chance of structural failure and rupture, and protects your valuable appliances from damage.

ANTI-LEAK⁽¹⁾
PROTECTION

Store Batteries Safely for Up to 10 Years⁽²⁾

You can depend on Panasonic Alkaline batteries to retain high power performance even after very long period in storage. High-quality materials work to prevent degradation while Anti-Leak Protection minimizes the chance of leakage to ensure long-life stability before and during usage.

POWER PROTECTION **10 YEARS⁽²⁾**
FOR UP TO **IN STORAGE**

⁽¹⁾ If used correctly (see backside of the blister)

⁽²⁾ Keeps energy for up to 10 years when not used (LR03 - LR6 - LR14 - LR20). Not valid for APB.

EVOLTA's Technical Innovations

Material Evolution

Thanks to combining exclusive high-reactive ingredients (such as titanium*) and high-purity manganese dioxide, the EVOLTA battery succeeds to generate extra voltage for power-hungry devices.

* Depends on type of battery.

Conventional cell

Manganese dioxide
Graphite

EVOLTA

New high-purity
manganese dioxide
Titanium additive*

Engineering Evolution

With an homogenised filling density inside the EVOLTA batteries, the current is allowed to flow with much greater consistency, keeping these batteries working when competition has given up.

Conventional cell

Low density
High density

Uneven density

EVOLTA

Homogenised density

Structural Evolution

Longer lasting performance is achieved thanks to an improved structural design allowing more space for active ingredients. A strong internal structure and a tough outer coating ensures far better impact resistance.

Conventional cell

Uniform can thickness
Less volume
Thick gasket

EVOLTA

Increased inner volume
Ultra-thin can with
varied thickness
Thin gasket technology

All these technical innovations make EVOLTA the ULTIMATE LONG LASTING BATTERIES

EVOLTA

The **EVOLTA** concept was born from a combination of “evolution” and “voltage” (power) and our technology has grown to become respected throughout the industry. **EVOLTA** has the ultimate long lasting energy and consistently outperforms our competitors’ premium products in commonly accepted independent performance tests.

ULTIMATE LONG LASTING ENERGY

3 Technological Evolutions

Material Evolution

New high-purity
manganese dioxide

Pro Power

The **PRO POWER** battery offers premium energy for your personal appliances. It is developed to provide reliable and dependable power, any place and any time.

With a complete product line up, the **PRO POWER** battery is ideal for high and medium drain appliances.

No Poor Connections, No More Stress

Triple Tough Coating for a Smooth Energy Flow

In conventional batteries, contact resistance on the terminals can build up and cause the nickel layer to peel off and the battery to fail. Triple Tough Coating solves this with an iron/nickel-plated alloy on the positive and negative terminals that improves adhesion and reduces contact resistance. The result? Enhanced energy flow and longer life.

READY TO USE 750 PRODUCT BENEFITS

- Ready to use: you can use them immediately after purchase
- Stay charged: after 1 year ⁽¹⁾
- Ideal for the occasional rechargeable battery user
- Long cycle life: up to 500 cycles ⁽²⁾

TELEPHONE BATTERIES PRODUCT BENEFITS

- Providing an ideal power solution for cordless communication appliances
- Packaging quantities in blister adapted to most frequently used appliances such as DECT phones or walkie talkies

(1) Approx. 80% capacity after 1 year storage at 20°C. Excluding D/C.

(2) Panasonic internal testing IEC61951-2 2017(7.5.1.4)

CHARGERS

5 YEAR WARRANTY

HEAVY USERS

Smart & Quick charger – BQ CC55

- Rapid charge
- Individual management/charge control (“Smart Charge”⁽¹⁾)
- Can be used all over the world (100-240 V)
- Case color: white

Item	Specifications
Input	AC100-240V 50-60Hz
Input part Structure	Fixed plug
Charging control	Smart Charge ¹ / -ΔV / Timer
Indicator	LED x 4 Charging: ON, Fully charged: OFF
Charger battery	AA x 1, 2, 3, 4 / AAA x 1, 2, 3, 4 cells
Charging time ⁽²⁾	AA: Approx 1.5 hours / 3 hours [2,000 mAh] AAA: Approx 1.5 hours / 3 hours [800 mAh]
Charger size (W x H x D)	68 x 120 x 65.5 mm (EU) / 68 x 120 x 62 mm (UK)
Weight	with EU-plug: 124 g - with UK-plug: 131 g

⁽¹⁾ This charger has “Smart Charge” function which checks voltage and temperature of battery automatically. Thanks to Smart Charge function, it saves time of charging and loss of energy & money.

FREQUENT USERS

Advanced charger – BQ CC17

- Can charge AA / AAA 4 cells
- Can be used all over the world (100-240 V)
- Individual management/-ΔV Control
- Case color: white

Item	Specifications
Input	AC 100-240 V 50-60 Hz
Input part Structure	Fixed plug
Charging control	-ΔV /Timer
Indicator	LED x 4 Charging: ON, Fully charged: OFF
Charger battery	AA x 1, 2, 3, 4 / AAA x 1, 2, 3, 4 cells
Charging time ⁽²⁾	AA: Approx 7h [2,000 mAh]; AAA: Approx 6h [800 mAh]
Charger size (W x H x D)	65 x 105 x 65 mm
Weight	107 g

OCCASIONAL USERS

Basic charger – BQ CC51

- Can charge AA / AAA 2 or 4 cells
- Can be used all over the world (100-240 V)
- Timer control
- Case color: white

Item	Specifications
Input	AC 100-240 V 50-60 Hz
Input part Structure	Fixed plug
Charging control	Timer cut (13 hours)
Indicator	LED x 2 Charging: ON, Fully charged: OFF
Charger battery	AA x 2, 4 / AAA x 2, 4 cells
Charging time ⁽²⁾	AA: Approx 10h [2,000 mAh]; AAA: Approx 10h [800 mAh]
Charger size (W x H x D)	66 x 108 x 65.1 mm (EU) / 66 x 108 x 62 mm (UK)
Weight	with EU-plug: 100 g - with UK-plug: 110 g

(2) AA/AAA 4 cells.

PRODUCT BENEFITS

- Improved consumer communication, designed to aid product rotation
- Clear time indications and features
- Free 5 year warranty for added reassurance
- All chargers have lead-free soldering, less harmful for the environment
- Worldwide compatibility
- Safety: non rechargeable detection
- LED Timer ready indication
- For all Ni-MH batteries

Compact charger – BQ CC50

- Can charge AA / AAA 2 cells
- Can be used all over the world (100-240 V)
- Safety timer: max. 13h
- Case color: white

Item	Specifications
Input	AC 100-240 V 50-60 Hz
Input part Structure	Fixed plug
Charging control	Timer cut (13 hours) Individual
Indicator	LED x 2 Charging: ON, Fully charged: OFF
Charger battery	AA x 1, 2 / AAA x 1, 2 cells
Charging time ⁽²⁾	AA: Approx 10h [2,000 mAh]; AAA: Approx 10h [800 mAh]
Charger size (W x H x D)	50 x 121 x 66.2 mm (EU) / 50 x 121 x 61.2 mm (UK)
Weight	with EU-plug: 86 g - with UK-plug: 96 g

COIN LITHIUM

SPECIAL PANASONIC SEALING TECHNOLOGY

Ensure a low self discharge rate and high battery performance especially after storage.

LONG-TERM DISCHARGE

Reaction materials in lithium batteries are more stable than other batteries. To ensure longer service life, Panasonic evaluates its lithium batteries in all conditions over longer periods.

Child safety packaging

Lithium battery storage safety tips:

- Keep all batteries in a sealed container in a high cupboard.
- Keep products well out of reach if the battery compartment isn't secured.
- Put 'flat' or 'dead' batteries out of reach straight away and recycle safely.

We recommend to keep batteries out of childrens' reach. If you suspect your child has swallowed a lithium battery, act this:

- Take your child straight to hospital.
- Do not let your child eat or drink.
- Do not induce vomiting.

COIN LITHIUM
is most suitable for:

HIGH VOLTAGE

Panasonic coin lithium batteries give more power with an output of 3V

-30 °C UP TO 60 °C

This battery offers reliable power even in a wide range of operating temperatures

UP TO 10 YEARS

These batteries can be stored for up to 10 years without use

ECO BENEFITS

Panasonic coin lithium batteries have 0% mercury added

CYLINDRICAL LITHIUM

FOR LIGHT WEIGHT
APPLIANCES
THAT NEED POWER

SAFETY GUARANTEE

Using 4 built-in safety features, Panasonic ensures a safe structure for its cylindrical lithium batteries and a power cut off in case of overload.

EXCELLENT PERFORMANCE IN EXTREME TEMPERATURES

Thanks to the unique composition of lithium and manganese dioxide, this battery is able to function in extreme temperatures (-40°C to +70°C) without hesitance.

LRV08

LR1

**STABLE DISCHARGE PERFORMANCE**

Due to Panasonic's innovative techniques, our Micro Alkaline products are designed to guarantee optimal and stable discharge results, as well as excellent high-drain discharge characteristics.

OPTIMAL LEAKAGE RESISTANCE

As a result of our excellent sealing technique Panasonic Micro Alkaline batteries have an optimal leakage resistance.

SILVER OXIDE
is most suitable for:

**HIGH PERFORMANCE**

Premium materials (silver) and construction (separator) ensures a high battery performance

**STABLE DISCHARGE**

Premium materials (silver) ensure a stable discharge performance

**ECO BENEFITS**

Panasonic silver oxide batteries have 0% mercury added

**UP TO 3 YEARS**

These batteries can be stored for up to 3 years without use

ZINC AIR

FOR **HEARING
AID**

PR10

PR13

PR312

PR675

**UNIQUE COMPOSITION**

Zinc air batteries are unique within the Panasonic range, as only one of the active materials is inside the battery. When tearing off the tab, oxygen enters and activates the battery.

HIGHEST ENERGY DENSITY

With the highest energy density of all electrochemical systems and due to their small size, these batteries are excellent to power small energy-hungry devices in need of continuous discharge.

Specifications:

Compact sized blisters. Easy to stow away; fits in purse or wallet.

USER GUIDELINES:

ZINC AIR
is suitable for:

**LONGER PERFORMANCE**

Designed to provide longer lasting performance in appliances

**NEW GENERATION**

Excellent for the latest generation of Bluetooth hearing aids

**VARIOUS TEMPERATURE CONDITIONS**

The battery gives a reliable power in various temperature conditions to enjoy outdoor activities longer.

**STEADY HIGH PERFORMANCE LEVEL**

The energy stays the best at all time in this light weight battery.

DISPLAYS

Multiple locations in store

As battery purchases are mainly impulse driven, locating batteries at multiple locations in stores is very important: at the battery shelf, near the toy/electro shelf, in secondary placement via displays and at the checkout. Placing displays at multiple locations is the key to a succesful battery business and can lead to a significant increase in sales.

DISPLAYS AT MULTIPLE LOCATIONS

- 1 standard battery shelf
- 2 displays near battery operated appliances (e.g. toys, electronics, DECT phones)
- 3 floor displays at gondola end
- 4 side hangers
- 5 magnetic displays (e.g. attached to baskets)
- 6 counter displays at checkout

COUNTER DISPLAYS & CLIPSTRIPS

Carton promotional

Counter display

- Horizontal facing
- Pre-filled
- Suitable for different types of packaging
- Topcard with extra communication possible

For all batteries

Use the same battery type/technology

When it's time to exchange batteries, be sure to replace all of them at the same time using the same battery type. Using different types (such as a mix of alkaline and zinc batteries, mix of different companies' batteries, or a mix of new and old batteries) may not only shorten service life, but could also result in battery leakage and explosion.

Avoid rough treatment

Try to handle your batteries with care. Avoid damaging the label, and don't expose them to excessive heat. Do not disassemble, modify, or solder the battery, and don't immerse the battery in liquid. Doing so may result in short-circuit, battery rupture, leakage, and possible injury.

Avoid installing batteries in the wrong direction

If batteries are installed improperly, they can become charged. This causes gas to build up, raising the internal pressure. This could lead to potentially dangerous overheating, leakage, rupture, and possibly result in personal injury.

Don't short-circuit your batteries

If batteries are accidentally shortcircuited, excessive current is generated instantaneously resulting in overheating and possible rupture. Avoid letting your batteries come into contact with metal objects such as necklaces, car keys, or paperclips.

What to do in case of leakage

If a battery leaks due to accidental misuse, and electrolyte (battery fluid) comes into contact with your eyes, rinse them well with water and seek medical treatment immediately. If the electrolyte comes in contact with skin or clothing, rinse the exposed area thoroughly with water.

Lithium battery storage safety tips

- Keep all batteries in a sealed container in a high cupboard.
- Keep products well out of reach if the battery compartment isn't secured.
- Put 'flat' or 'dead' batteries out of reach straight away and recycle safely.

WE RECOMMEND TO KEEP BATTERIES OUT OF CHILDRENS' REACH.

If you suspect your child has swallowed a lithium battery, act this:

- Take your child straight to hospital.
- Do not let your child eat or drink.
- Do not induce vomiting.

For Ni-MH rechargeable batteries

Never charge primary batteries

Charging primary batteries is highly dangerous and may result in injury. Recharge only Ni-MH batteries in an approved charging device. If Ni-MH batteries are charged with a device not specifically designed for that product, the battery may overheat, rupture, and leak.

Recharge Ni-MH batteries when fully depleted

It is best to recharge your Ni-MH batteries after they have been fully discharged. Doing so may provide longer usage and prolong the life of the product. When recharging is complete, it's also a good idea to remove the batteries from the charger as soon as possible. Remove the charger from the electrical outlet when batteries are replenished.

Replace all batteries at the same time

Mixing batteries at different states of depletion in your device can result in battery-fluid leakage and potential injury. When using rechargeable batteries, we recommend installing cells that were recharged at the same time.

Tips for enjoying better performance

Switch off your device after use

Remove batteries from devices not in use for long periods

Carry a spare set of batteries
