

Charge your USB devices super fast  
with Power Delivery Technology

### What is USB-C PD?

USB-Power Delivery (PD) is a fast-charging technology based on the USB-C standard. Many smartphones, tablets and laptop brands support the technology today, which provides much higher performance than standard charging methods.

### What are the benefits of USB-C PD?

USB-C PD can supply a greater amount of power than standard wall chargers, so it is especially useful for getting power back into devices fast. USB Power Delivery can charge smartphones and tablets up to 70% faster than a standard USB charger. Plus, since USB Power Delivery is a widely adopted standard, more chargers are using the technology. This flexibility means you won't have to worry as much about losing, breaking or not having your proprietary charger because more chargers will work with your USB-C PD device.
